Application of Community Engagement in Implementation Research

Case Studies: Successful Community Engagement in Cancer Control

Challenges and Solutions

# About me

**Prof. Benedict N. Azuogu**

*Director of Research, Grants & Partnership, AEFUTHA*

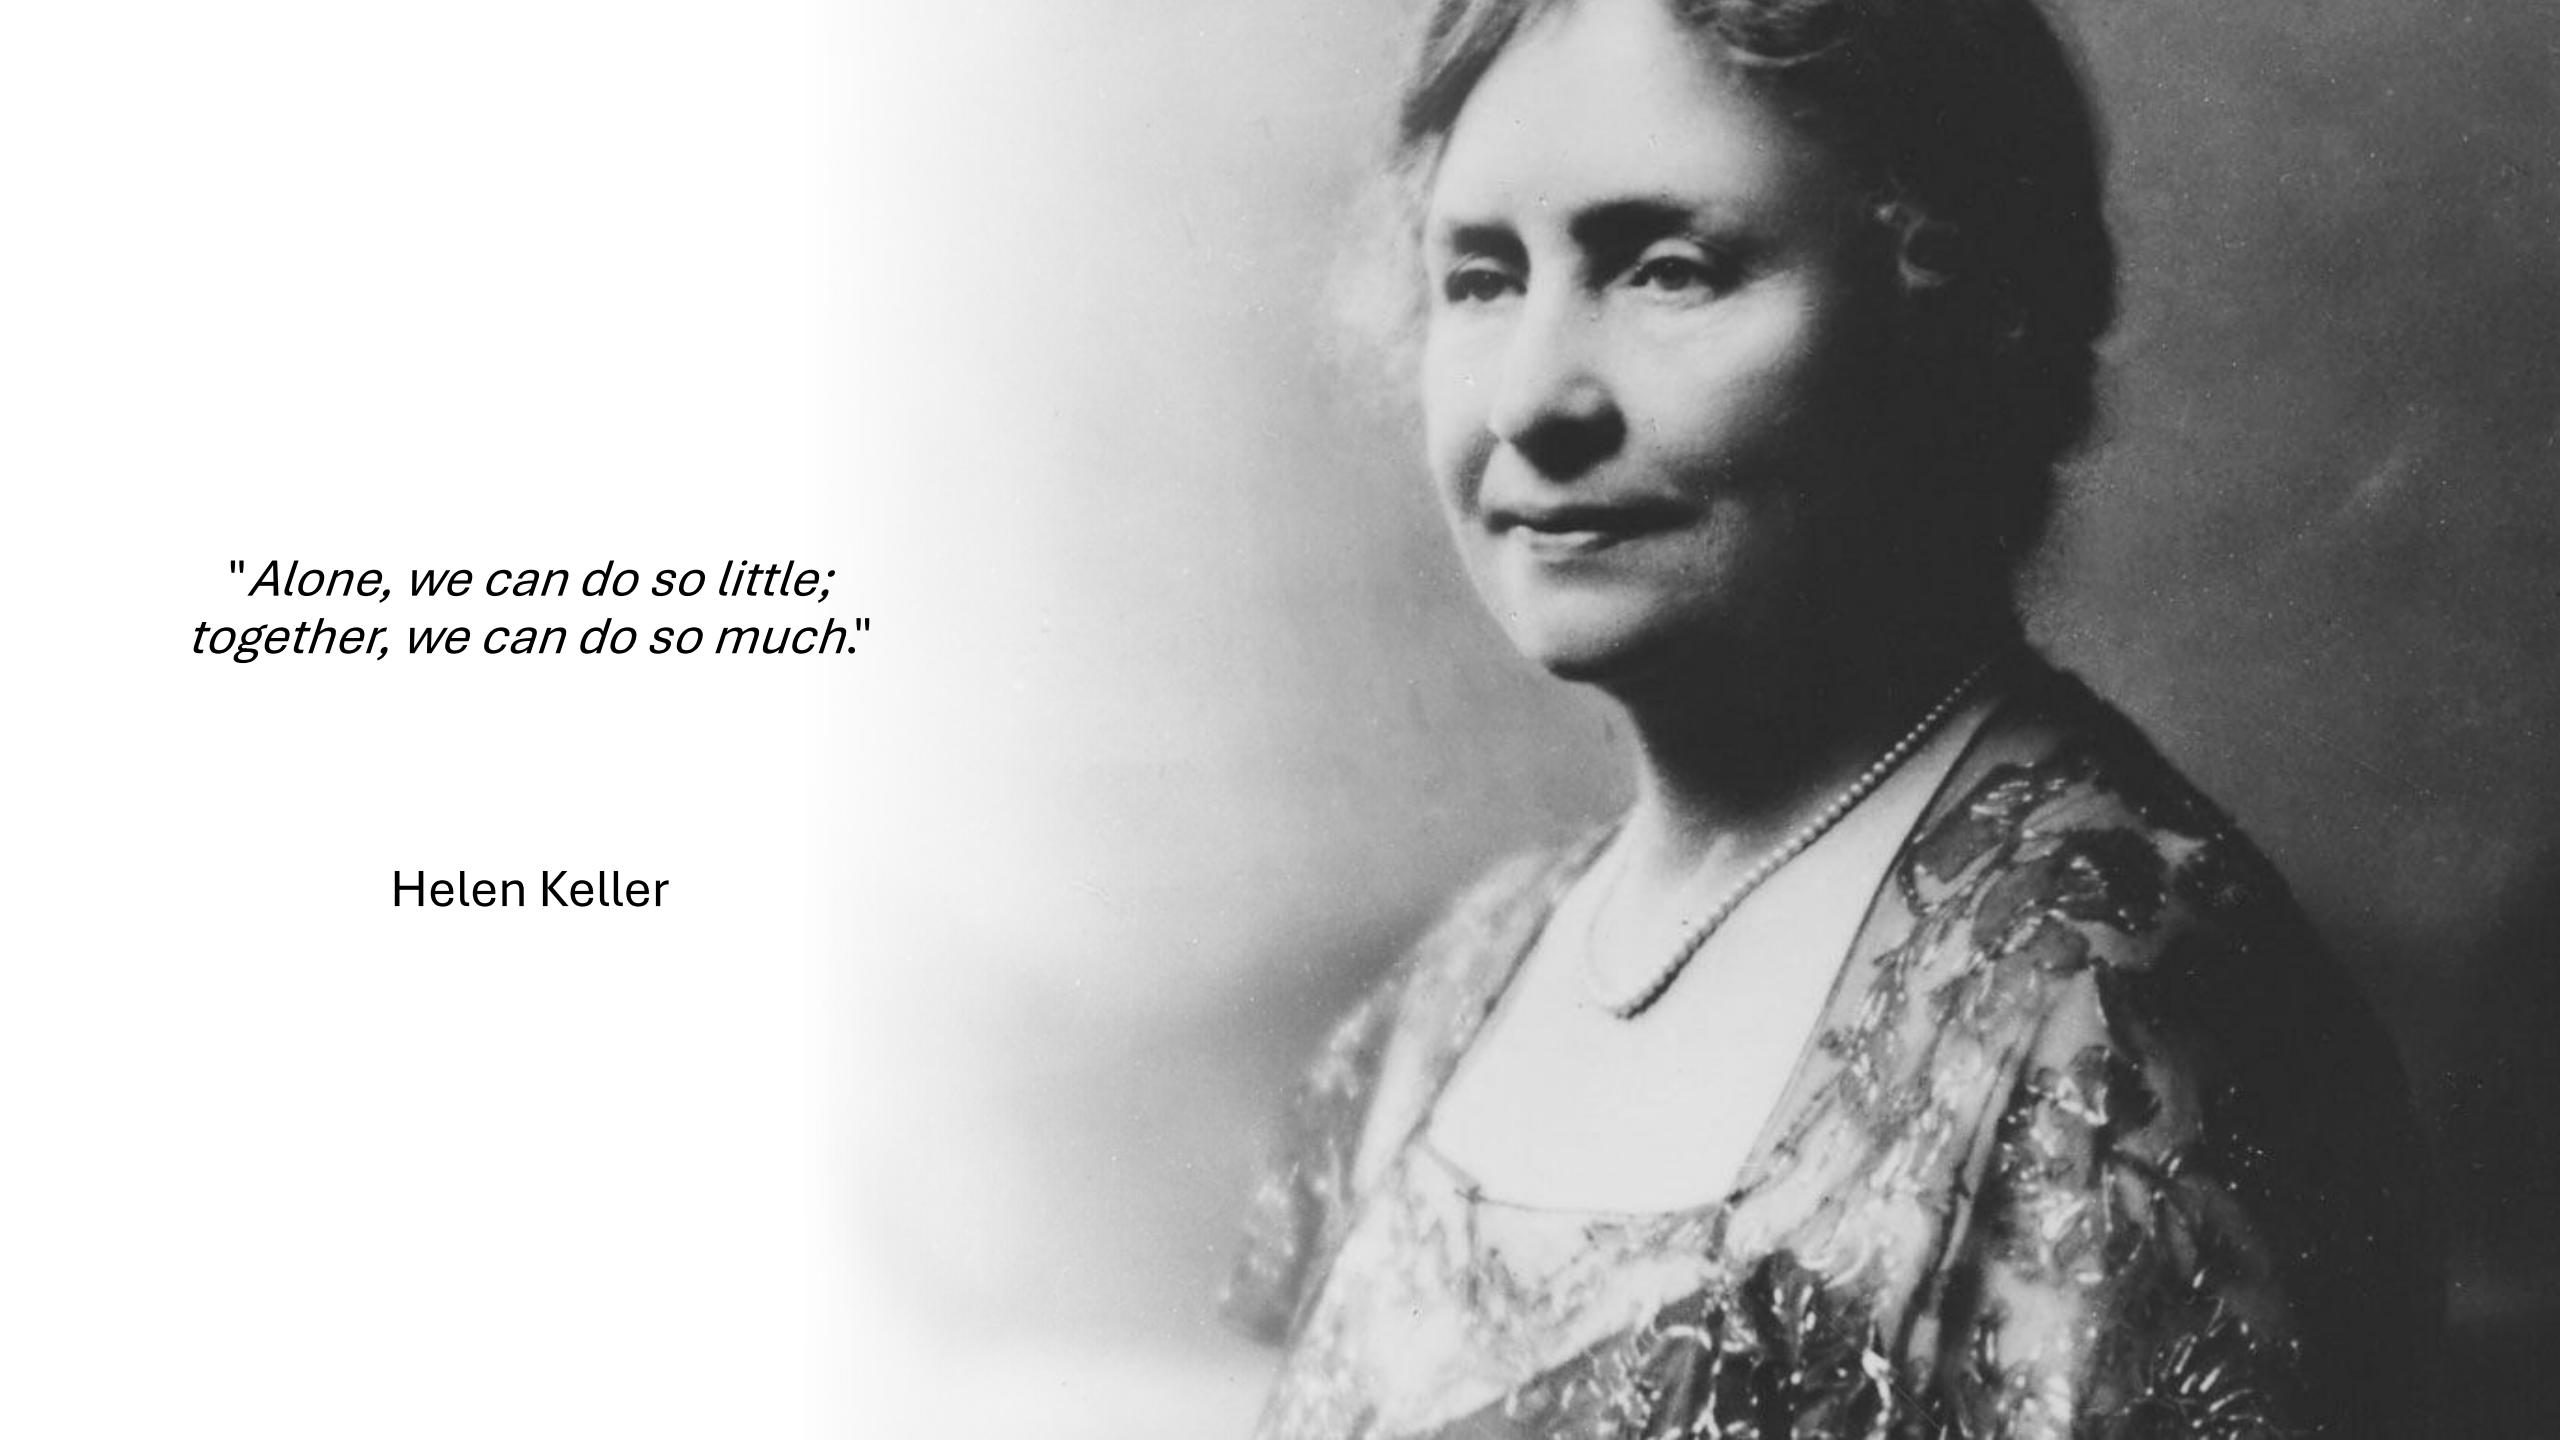

- Son, Brother, Husband, Father, Uncle, Brother-in-law
- Friend, Teacher, Trainer, Mentor, Coach
- MBBS (2000); FWACP (2010); MPH (2015); Advance Cert. in Vaccinology (2017); MSc. in Health Policy & Health System (2020); Kofi Annan Fellowship in Global Health Leadership (2022)
- **Core Member:** Nigeria Immunization Technical Advisory Group (**NITAG**) 2015 to 2019
- **Research interests:** Clinical trials; Vaccinology, Health policy, Global health diplomacy
- **Current research:** Co-Principal Investigator in Lassa fever vaccine trial, and Lassa fever epidemiological research in West Africa
- **Contact:** [bnazuogu@gmail.com](mailto:bnazuogu@gmail.com); [bnazuogu@ebsu.edu.ng](mailto:bnazuogu@ebsu.edu.ng)
- **LinkedIn:** <https://www.linkedin.com/in/benedict-n-azuogu-72993236>

# About me

**Chisom Obi-Jeff**  
*CEO, Brooks Insights*

- Daughter, Sister, Wife, Mother, Sister-in-law, Niece, Auntie, Cousin
- BSc. in Microbiology (2006); MSc. in Public Health (2014); PhD in Epidemiology and Population Health (*in-review*).
- Research interests include **implementation research** to inform health policies, programs, and practice and **applying participatory approaches and behavioural insights** to address global health challenges and improve health-seeking behaviour, equity, and outcomes.
- Current research **builds evidence on implementation strategies to improve the uptake of evidence-based interventions** and outcomes in maternal, adolescent, and child health.
- **Contact:** [chisom.obi@brooksinsights.org](mailto:chisom.obi@brooksinsights.org)
- **LinkedIn:** <https://www.linkedin.com/in/chisom-obi-jeff-36564363/>

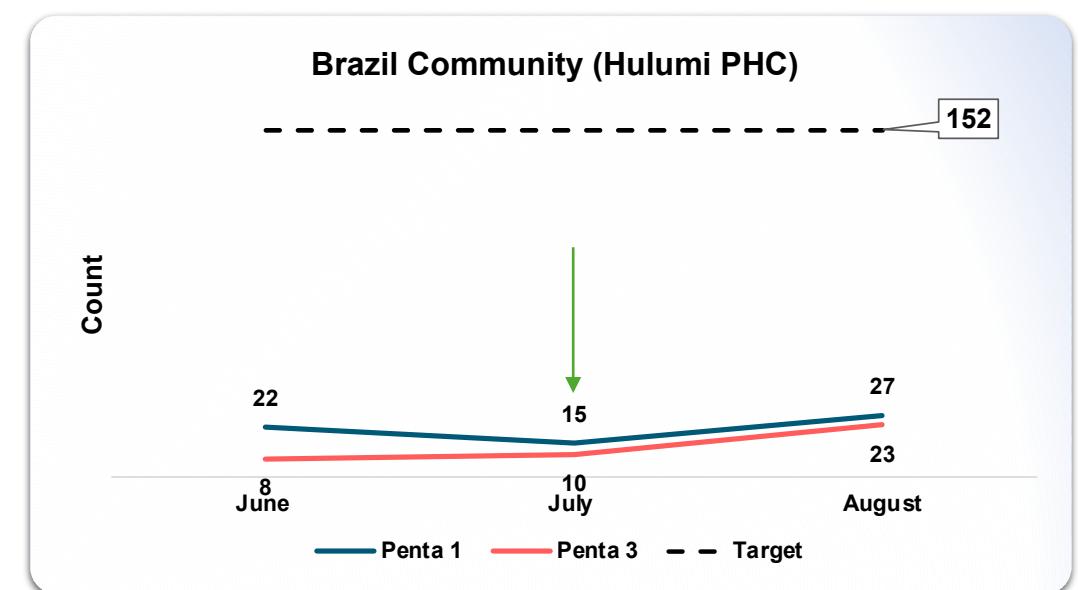

*"Alone, we can do so little;  
together, we can do so much."*

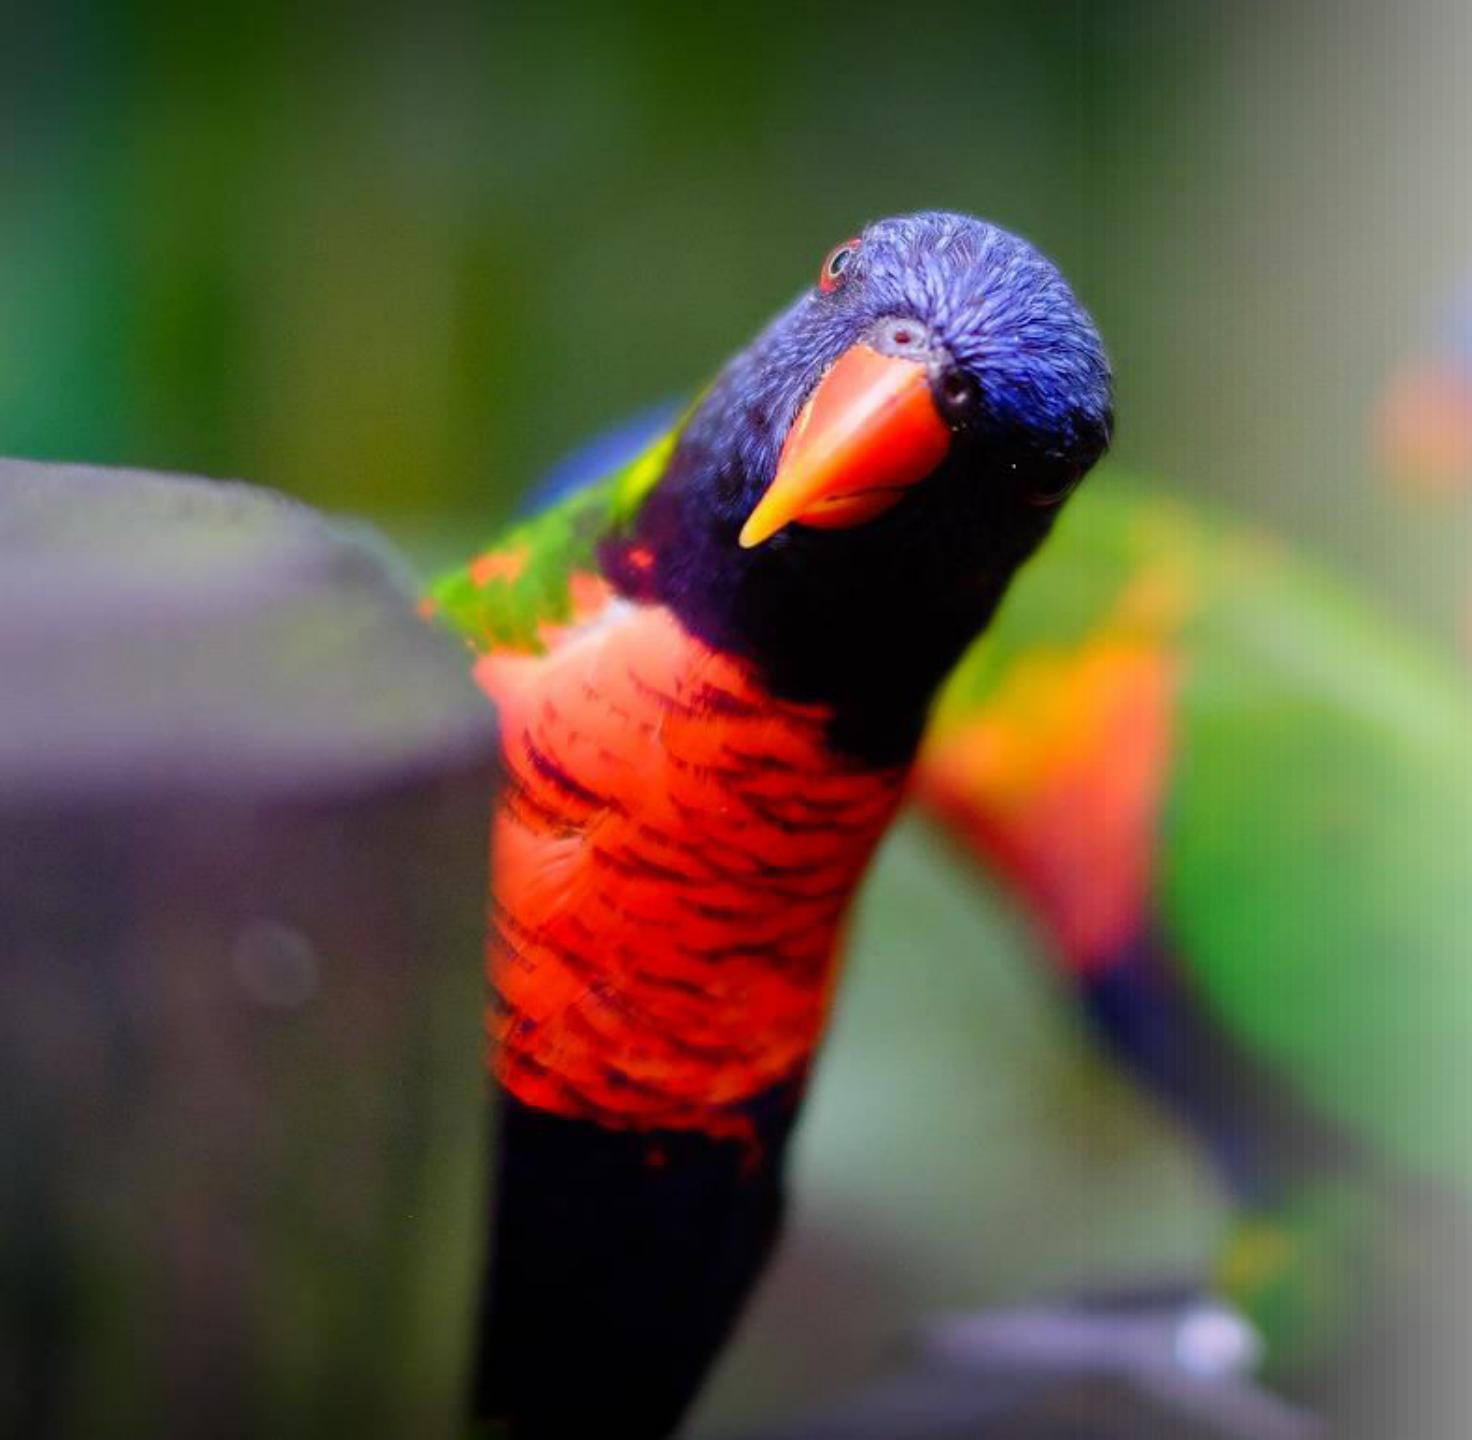

Helen Keller

# “Operation Bring Vaccination to the Community” addresses the distance barrier to vaccination

- Brazil Community
- No transport fare to visit Hulumi PHC for vaccination
- “*Operation bring vaccination to the community*” field tested for 4 weeks (July 24-August 24, 2023)

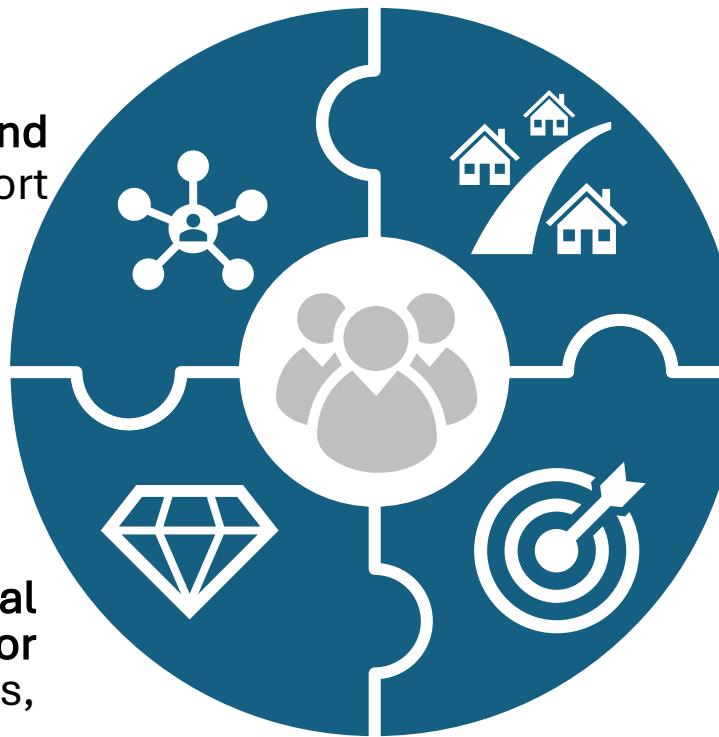

What does a  
community  
mean to you?

# A community is a group of people living in the same place or having a particular characteristic in common

## Network

People sharing the **same social and support network** (e.g., cancer support groups-Healing Circles)

## Values and norms

People sharing the **same cultural background, traditions, religion, or belief** (e.g., traditionalists, Pentecostals, Adventists, Muslims, etc.)

## Geographic

People **living in the same area** (e.g., a neighbourhood, town, village, street, or city)

## Interest-based

People sharing a **common interest, goal, identity, or sense of purpose or belonging** (e.g., cancer survivors, health advocates)

# What is Community Engagement?

---

# Community engagement involves purpose-driven interactions between communities and program implementers

- Community engagement involves “working with communities” other than working for/in communities.
- A people engagement that aims to achieve a broad range of **collective objectives**, such as health, economic, and social gains.
- We need an **in-depth understanding** of community members' lived experiences, local knowledge and leadership, existing community structures, values, and intangible community systems that influence behaviours.

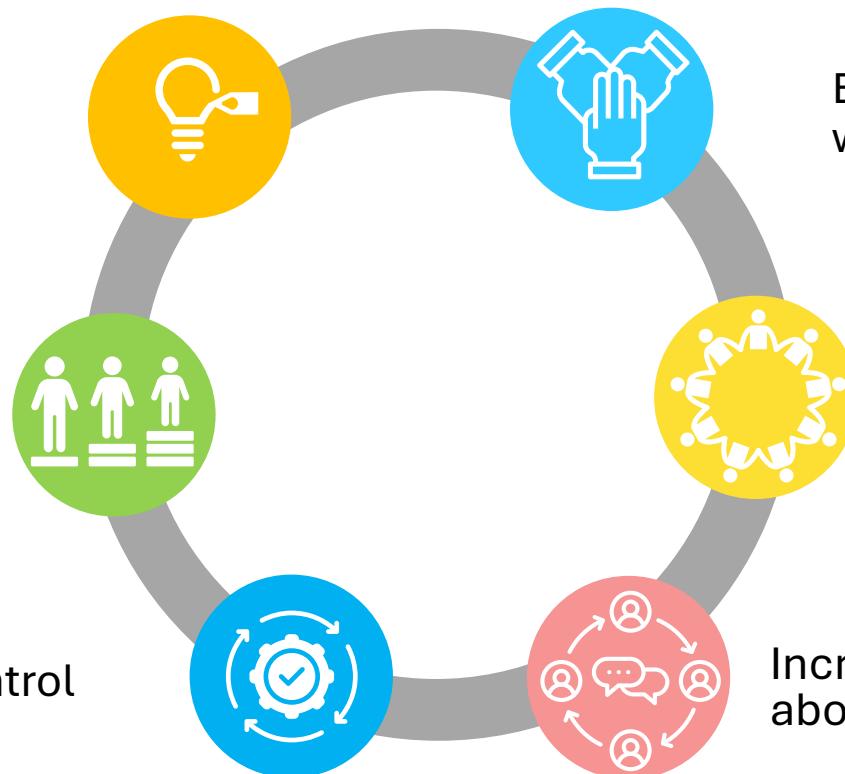

# Community engagement in cancer control enhances trust, equity, and sustainability

Ensures **culturally appropriate** interventions

Promotes **equity** in access to cancer control interventions.

Enhances **sustainability** of cancer control programs

Builds **trust, rapport, and collaboration** with community members

Encourages **community ownership** and **participation** in cancer control programs

Increases **communication and awareness** about cancer prevention and treatment

An effective community engagement ensures inclusiveness, mutual accountability, good governance, and sustainability

# Participation ensures inclusiveness by engaging diverse community members

- **Inclusive process of giving voice to all persons** who have a stake and/or are affected by the outcome of the problem to be addressed.
- Conscious **identification and mapping of all target groups**, including policymakers, program implementers, vulnerable, marginalized, migrant groups, and the elderly.
- Community-**identifiable groups are involved in all stages of the intervention** to create a strong sense of ownership and felt responsibility for the community.

# Accountability ensures transparency, openness, and honesty about goals and processes.

**Mutual  
Accountability**

- Involves **sharing information about actions or intentions**.
- **Groups and individuals in partnership are accountable to each other** when they honour their commitment to communicate plans and are responsible for their actions.
- Ensuring **transparency**, a high **sense of responsibility**, and **trust** in their fellow citizens.

# Good governance ensures respect and values the knowledge and experiences of the community

**Governance**

- The **structure of leadership** for decision-making and how those decisions are implemented.
- Good governance is characterized by **accountable, transparent, just, responsive**, and **participatory** leadership.
- Desired impacts of implementation research projects are highly sustainable if the governance structure is well considered.

# Sustainability of cancer control programs requires community ownership and active participation

- Sustainability is the ultimate vision of most public health interventions where the **local community sees the initiatives as their own** and is overtly committed to supporting them as part of their daily responsibilities.
- Therefore, it is imperative to ensure the application of the other three principles of community engagement to achieve a meaningful, sustained cancer control program.

Can you briefly explain how you did/would do your community engagement?

# The process of community engagement in D&I is dynamic and needs a systematic approach to conduct it successfully (1/2)

## Pre-Entry Preparation

- **Desk/Literature Review:** For community's demographics, culture, needs, and past interventions
- **Stakeholder Analysis:** identify key stakeholders, including community leaders, organizations, and potential partners

## Initial Contact: Meet with community leaders, gatekeepers, and influential individuals to build trust

- **Attend Community Events:** participate in local events for familiarization and understanding their dynamics

## Conduct Needs Assessments: use surveys, focus groups, and interviews to identify their needs, strengths, and priorities

- **Asset Mapping:** identify resources, organizations, and infrastructure for your intervention

## Building Partnerships and Collaborations

- **Form Community Advisory Boards:** Establish boards or committees to guide the research process
- **Develop Collaborative Agreements:** Formalize partnerships through Memoranda of Understanding (MOUs)

## Engaging the Community in Planning

- **Co-Design Interventions:** Work with community members to design interventions that are culturally relevant and acceptable
- **Conduct small-scale pilot tests:** to refine the intervention based on community feedback

## Capacity Building: Train community members to build skills necessary for implementation and sustainability

- **Resource Allocation:** Ensure that the community has the resources needed for successful implementation

# The process of community engagement in D&I is dynamic and needs a systematic approach to conduct it successfully (2/2)

## **Dissemination Strategies:** Create plans for disseminating information about the intervention, using effective channels

- Use existing community networks and organizations to spread information

## **Implementation:** Implement the intervention with continuous engagement and support from the community

- **Monitor and Evaluate:** Continuously monitor the implementation process and evaluate outcomes with community input

## **Sustainability Planning**

- **Build Local Ownership:** Ensure that the community feels ownership of the intervention to promote sustainability.
- **Plan for Long-Term Support:** Develop strategies for maintaining the intervention, including funding

## **Feedback and Adaptation**

- **Gather Continuous Feedback:** Regularly collect feedback from the community to identify areas for improvement
- **Adapt Interventions as Needed:** Modify the intervention based on feedback and changing community needs

## **Documentation and Reporting**

- **Document Processes and Outcomes:** Keep detailed records of the implementation process and outcomes.
- **Share Findings:** Disseminate results to the community, stakeholders, and the broader scientific community through reports, presentations, and publications

# Community engagement and cultural adaptability of interventions are important in facilitating the acceptability of new innovations in Nigeria<sup>1</sup>

Yellow VIR band

Purple VIR band

Aqua VIR band

## Overview

A Vaccine Indicator and Reminder (VIR) band was designed to serve as a reminder to improve demand for vaccine uptake in Kebbi State, Nigeria

## Strategies Used

The strategies involved 1) intensive sensitization and mobilization of community gatekeepers to advocate for immunization; 2) training and engaging TBAs to refer mothers for vaccination and VIR bands; and 3) training facility-based health workers to secure the band on an eligible child.

## Outcome

- Community members **likened it to a “wristwatch”** that constantly reminds mothers when they need to vaccinate their children.
- Strong support from community leaders, TBAs, and participating health workers** increased the acceptability of the band.
- Similarly, the VIR band’s aesthetics, ease of use, and perceived benefits contributed to its acceptability.
- However, there were concerns about wearing accessories on the ankle, the red indicator colour, and the malfunctioning of some bands.

# Community involvement and tailored strategies improved the uptake of cervical cancer screening in Ghana<sup>2</sup>

## Overview

In Ghana, a community-based cervical cancer screening program was developed in response to the low uptake of the current hospital-based screening strategy.

## Strategies

- Interactions with women and community members (gathering feedback and insights, understanding the social and cultural dynamics, and co-creating tailored solutions), requiring recruited women to report at a central location within their communities for specimen collection at convenient times
- Community health workers and volunteers engaged women and facilitated specimen collection within the communities.

## Outcome:

- The community-based specimen collection strategy resulted in a significantly higher response rate than the hospital-based strategy.
- Of the women invited to report at a specified location within the community, **95.1% reported for specimen collection**, leading to an overall response rate of 60.4%.
- There was high participation and engagement. Almost **89.7% of the women performed both self and health - personnel sample collection**.

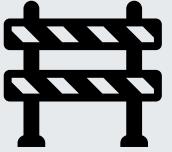

2. Awua, A. K., Wiredu, E. K., Afari, E. A., Tijani, A. S., Djanmah, G., & Adanu, R. M. (2018). A tailored within-community specimen collection strategy increased uptake of cervical cancer screening in a cross-sectional study in Ghana. *BMC Public Health*, 18, 1-11.

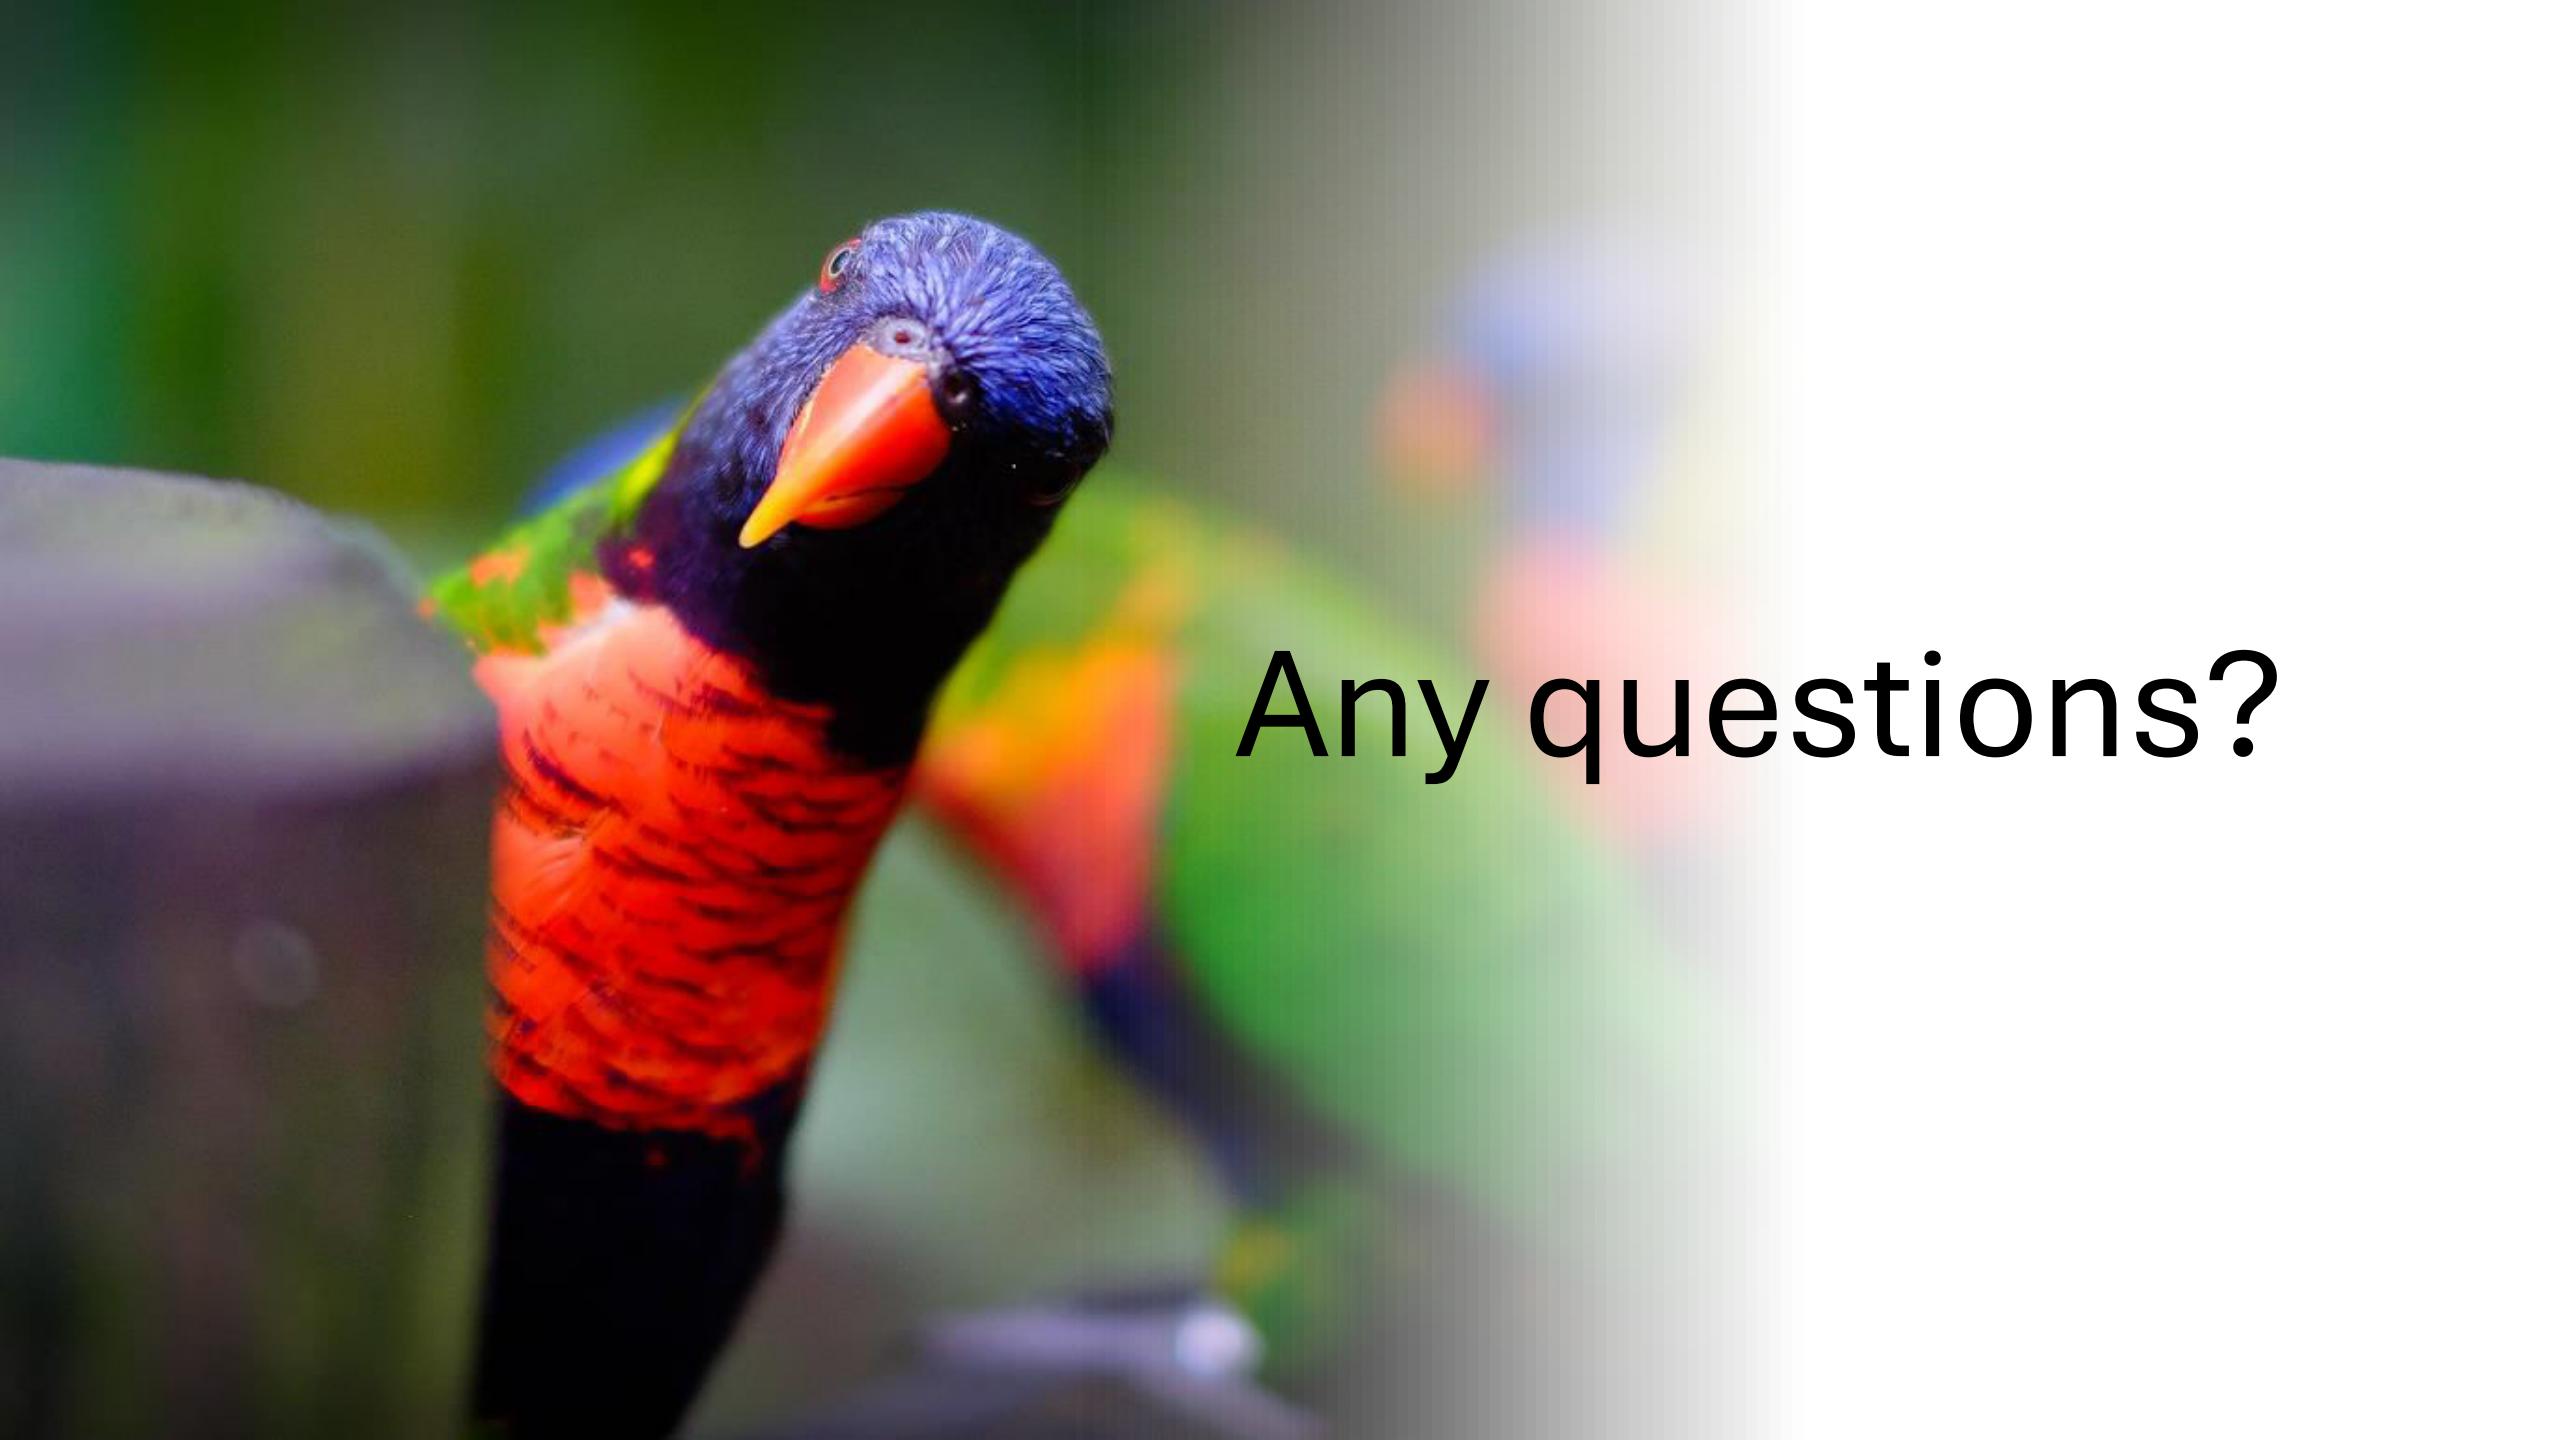

## Share your challenges with implementing community engagement

- What are some challenges that one could face when conducting community engagement activities?
- How could some of these challenges be mitigated?
- How would you effectively work in conflict-ridden communities?

# Best practices to address challenges with community engagement toward the end-goal of cancer prevention and control

Challenge	Solution
 Limited community ownership and trust	<ul style="list-style-type: none"><li>• Early engagement of community members</li><li>• Include community members and their social networks in implementing the research activities</li><li>• Maintain regular communication and engagement to build relationships</li><li>• Build trust by being transparent about the project's goals, processes, and progress</li><li>• Identify and develop community members' skills to foster a sense of ownership and responsibility.</li></ul>
 Cultural barriers	<ul style="list-style-type: none"><li>• Implement culturally appropriate interventions and use communication strategies that resonate with the community's culture.</li><li>• Work with existing community social support structures</li></ul>
 Resource limitations	<ul style="list-style-type: none"><li>• Partner with local/community-based organizations and leverage existing resources.</li></ul>

A close-up photograph of a lorikeet parrot. The bird has a vibrant blue head, a bright orange beak, and a body covered in red and orange feathers with some black markings. It is perched on a branch, looking slightly to the left. The background is blurred with green and yellow colors, suggesting a natural, outdoor setting.

Any questions?
